

One template, many projects

cellxgene-mamplate.json

```
image: ghcr.io/chanzuckerberg/cellxgene:1.2.0
port: 5005 resources: 4 CPU / 16 GiB
command: cellxgene launch __project.files__ --host 0.0.0.0
```

instantiates

scrna-alice-project-mamplan.json

```
files: rna_atlas.h5ad
owner: alice
datatype: scRNA-seq
```

atac-bob-project-mamplan.json

```
files: atac_peaks.h5ad
owner: bob
datatype: ATAC-seq
```

spatial-carol-mamplan.json

```
files: spatial.h5ad
owner: carol
datatype: Spatial
```

→ <https://cluster.org/cellxgene/spatial-carol>

Separation of Concerns

Config file	Written by	Changes per...	Contains
config.json	DevOps	Never	Cluster hosts S3 credentials Auth proxy
mamplate.json	Admin	Per tool	Docker image Resources Command template
mamplan.json	Analyst	Per project	Data files Owner / lifetime Metadata

fixed
once

*Each Mamplate can be instantiated by any number of Mamplans.
Analysts write only a minimal project description;
all infrastructure complexity is handled by Mampok.*
